

Transitioning from v2 to v3

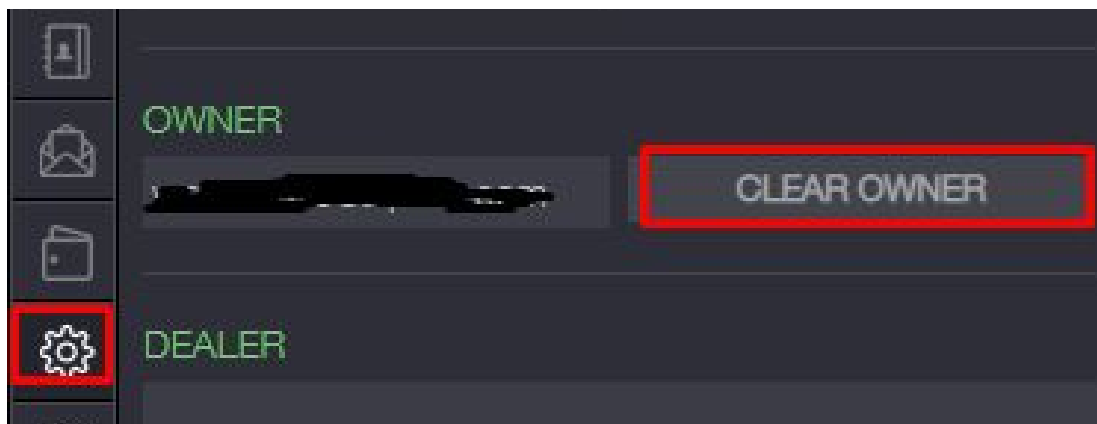

Disclaimer: **v3 is still in its beta phase**

Transitioning from my.zipato.com (v2) to the new iOS/Android App which is to be found at the 3plus App Store (v3):

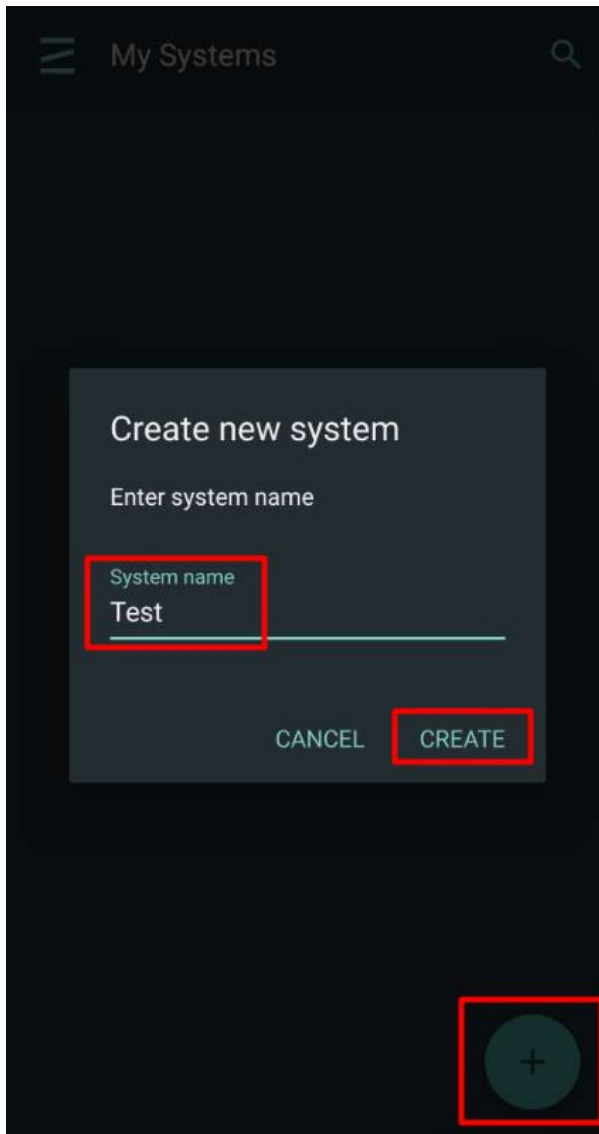

- First of all, keep in mind that you have to have one active PRO licence on a controller in order to be able to have Master-Slave relation in one system **OR** a Multiserver Licence (49,- EUR - up to 5 servers) will be needed
- You can still use one of the following controllers as a Master server within a system (without a Multiserver Licence):
 - o ZipaTile (1)
 - o ZipaTile 2
 - o Zipabox 2
 - o ZipaMicro
- The Zipabox 1 can't be used as a Master server, yet can be used as a slave controller

Afterwards follow the steps below:

- 1) You will have to clear the owner on the controllers you would like to have transitioned using the Web UI – my.zipato.com (v2):

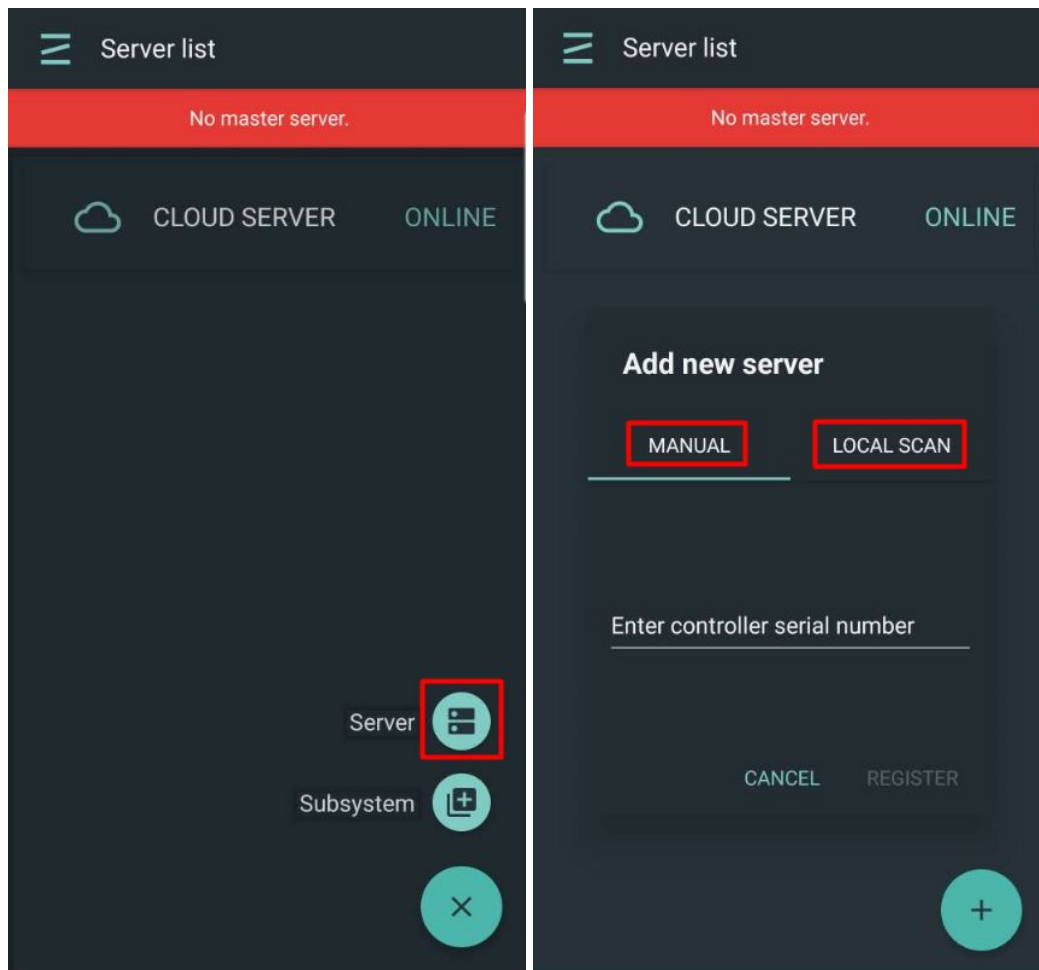

2) Create a System on v3 using the new App:

The screenshot displays the 'My Systems' application interface. At the top, there is a header bar with a menu icon on the left, the text 'My Systems' in the center, and a search icon on the right. Below the header, a modal dialog titled 'Create new system' is centered. Inside this dialog, the text 'Enter system name' is followed by a text input field. The input field contains the text 'Test' and is highlighted with a red rectangular box. Below the input field, there are two buttons: 'CANCEL' and 'CREATE'. The 'CREATE' button is highlighted with a red rectangular box. In the bottom right corner of the app, there is a circular button with a plus sign inside, which is also highlighted with a red rectangular box.

3) Add a Master server to your System

You can add a Server manually (by entering a Serial Number) or with the Local scan (a Server and your mobile must be in the same network).

4) Synchronize the system/server afterwards.
